Contents to volume 66

Computational physics	*Issue*	*Page*
Van Oldenborgh, G.J. FF – a package to evaluate one-loop Feynman diagrams	1	1
Abbiendi, G. and L. Stanco A new heavy flavour generator in e–p collisions	1	16
Mino, H. A vectorized algorithm for cluster formation in the Swendsen–Wang dynamics	1	25
Gyulassy, M. and M. Harlander Elastic tracking and neural network algorithms for complex pattern recognition	1	31
Yeung, W. Parallelising the LMTO band-structure program on transputer arrays	1	47
Soares Neto, J.J. and J. Linderberg A numerical study of various finite-element method schemes applied to quantum mechanical calculations	1	55
Swarte, J.H. Precision of solutions in nonlinear least-squares model fitting	2&3	143
Jamieson, M.J. and M.L. Du Log-derivative methods based on linear two-step integration formulae	2&3	150
Berblinger, M. and Ch. Schlier Monte Carlo integration with quasi-random numbers: some experience	2&3	157
Bondeson, A. and G.Y. Fu Tunable integration scheme for the finite element method	2&3	167
Yi, J.-Y., J. Bernholc and P. Salamon Simulated annealing strategies for molecular dynamics	2&3	177
Singleton, G.L., C.-H. Wu and J.-H. Tsai A parallel Monte Carlo simulation for gaseous electronic on a dynamically reconfigurable multiprocessor system	2&3	181
McKenzie, J.S., M.R. O'Brien and M. Cox Solution of three-dimensional Fokker–Planck equations for tokamak plasmas using an operator splitting technique	2&3	194
Arter, W. The use of upwind schemes at high Reynolds number – a cautionary note	2&3	207
Allison, A.C. and X. Huang An exponentially fitted two-step method with predictor–corrector form for the solution of nonlinear or coupled Schrödinger equations	2&3	211

Computational physics (continued)

	Issue	Page
Yabe, T. and T. Aoki A universal solver for hyperbolic equations by cubic-polynomial interpolation. I. One-dimensional solver	2&3	219
Yabe, T., T. Ishikawa, P.Y. Wang, T. Aoki, Y. Kadota and F. Ikeda A universal solver for hyperbolic equations by cubic-polynomial interpolation. II. Two- and three-dimensional solvers	2&3	233
Van Milligen, B.Ph. and N.J. Lopes Cardozo Function parametrization: a fast inverse mapping method	2&3	243
Vackář, J., A. Šimůnek and O. Šipr Integration of free–free radiative-transition matrix elements	2&3	259
Hsieh, H.C. and W.C. Ermler Numerical and analytical representations of Eulerian angle matrices for symmetric top molecules	2&3	266
Sagar, R.P. A Gaussian quadrature for the calculation of generalized Fermi–Dirac integrals	2&3	271

Computer programs in physics

Straton, J.C. CMPT – a program giving the analytical result of Nordsieck's integral including powers of the radius from −1 to +6	1	66
Lässig, M. and G. Mussardo Hilbert space and structure constants of descendant field in two-dimensional conformal theories	1	71
Lima, P.M. A program for deriving recoupling coefficients formulae	1	89
Lima, P.M. A new program for calculating matrix elements in atomic structure	1	99
Barberio, E., B. van Eijk and Z. Wąs Photos – a universal Monte Carlo for QED radiative corrections in decays	1	115
Storey, P.J. and D.G. Hummer Fast computer evaluation of radiative properties of hydrogenic systems	1	129
Jadach, S., B.F.L. Ward and Z. Wąs The Monte Carlo program KORALZ, version 3.8, for the lepton or quark pair production at LEP/SLC energies	2&3	276
Castellano, M., E. Nappi, F. Posa and G. Tomasicchio A multiresolution noise-removal algorithm for visual pattern recognition in imaging detectors	2&3	293
Schmitz, J., H.-R. Trebin and U. Rössler TRS: a program to calculate Landau levels and direct dipole transitions in uniaxially stressed semiconductors	2&3	308

Computer programs in physics (continued) *Issue* *Page*

Champagne, B., W. Hereman and P. Winternitz
The computer calculation of Lie point symmetries of large systems of differential equations 2&3 319

Torrens, F., E. Ortí and J. Sánchez-Marín
Pair potential calculation of molecular associations: a vectorized version 2&3 341

Seiler, W.M.
SUPERCALC – a REDUCE package for commutator calculations 2&3 363

Chen, L.-J., C.-K. Hu and K.-S. Mak
FORTRAN code for the cluster Monte Carlo study of the q-state Potts model on D-dimensional hypercubic lattices 2&3 377

MacLaren, J.M., D.P. Clougherty, M.E. McHenry and M.M. Donovan
Parameterised local spin density exchange-correlation energies and potentials for electronic structure calculations 2&3 383

Perger, W.F. and V. Karighattam
Relativistic continuum wavefunction solver 2&3 392

Copley, J.R.D.
Monte Carlo calculation of multiple scattering effects in thermal neutron scattering experiments: modification to spherical geometry 2&3 403
